India SMART UTILITY Week 2026

10 – 14 March 2026, New Delhi

AMI 2.0 - GRID INTELLIGENCE, DER INTEGRATION & CYBER RESILIENT ARCHITECTURE

Presented By

Vijay Panpalia, VP - Product Engineering, SEW.AI

 12 March, 2026

 The Lalit, New Delhi

AMI 2.0 - GRID INTELLIGENCE, DER INTEGRATION & CYBER RESILIENT ARCHITECTURE

Vijay Panapalia

VP - Product Engineering

SEW.AI

The Largest Distributed Digital Infrastructure

India Has Ever Deployed In The Power Sector

Millions
of Connected Endpoints

80 Million
EVs by 2030

280 GW
Total solar by 2030

250M
Smart Meters by 2027

And when infrastructure reaches this scale.....

Architecture Matters.

Today

AMI Architecture

- Package-wise AMI rollouts
- Multi-vendor, multi-protocol fragmentation
- Siloed HES-MDMS-Billing stacks
- Installation-centric KPIs
- Limited feeder / DT level intelligence

The next outages won't be
caused by **lack of power.**

They'll be caused by
lack of visibility

You Cannot Manage

What the Utility Can See Today

- Consumption
- Billing cycle data
- Feeder-level load

What You Cannot See

What the Utility Cannot See

- Transformer stress in real-time
- Behind-the-meter generation
- EV mobility patterns
- Reverse power flow & V2G direction
- Cyber anomalies at edge
- Device identity integrity

The Strategic Shift

Project Thinking vs Platform Thinking

When AMI Is Treated As a Platform

	AMI 1.0	AMI 2.0
Structural Integrity	Rollout-focused	Architecture-first Design
Objective	Billing Automation	Grid-edge Observability
Data	Interval Reads	Event-driven
Analytics	Post-facto	Predictive
Architecture/Integration	Siloed/Proprietary	Open/Interoperable
Security	Perimeter	Zero Trust
Business Model	Capex Project Execution	Digital Platform Enablement

This Shift Is Already Happening Globally

10M+ endpoints unified
on AI-driven platforms

80% faster grid resolution
with AI Agents & Co-Pilots

AI-driven outage prediction
and restoration workflows

40% improvement in
operational efficiency

DER & EV orchestration
integrated with CX + Workforce

360-degree connected
customer + grid + workforce

Real-time transformer stress
& loss analytics at scale

Enabling prosumer and flexumer
across multiple global utilities

Build The Right Architecture Backbone

Connected
Platform Approach

Grid-Edge
Intelligence

Policy
Acceleration

SEW.AI Is Already Leading This Across 47+ Countries

Meet SEW.AI

Unifying Grid, DER, Customer & Operations into One Connected AI Platform

Connected Intelligence

across Customer, Workforce and Grid

Customer 360°

Grid 360°

Workforce 360°

Powered by Vertical AI

The Future Utility

- Real-Time Grid Operators
- DER Marketplace Orchestrators
- Consumer Experience Platforms
- Cyber-Secure Digital Infrastructure Providers

A Utility Transformation Journey from Oklahoma USA

Customer + Grid + Workforce

The Starting Point

- AMI 2.0 deployment with new meters & FAN
- Multiple legacy systems (OMS, MDMS, CC&B, EAM)
- Siloed grid, customer & workforce operations
- Reactive outage management

The Transformation

- Grid (OMS/DMS integration, last-gasp outage signals)
- Customer (self-service, 15-min usage, outage alerts)
- Workforce (AI-driven FSM, auto-scheduling, mobile field access)
- Asset intelligence (advanced fault location, transformer visibility)

The Outcomes

Customer

- Real-time outage notifications
- Granular usage insights
- Remote connect/disconnect

Operations

- Faster storm restoration
- Advanced fault location
- Asset data in field
- Smart auto-scheduling

Future-ready

- Time-varying rates
- DER/EV program readiness
- Grid-edge applications

Not A Project

Make AMI A Platform
