SMART UTILITY
Week 2026
10 – 14 March 2026, New Delhi

Session : Name of the Session

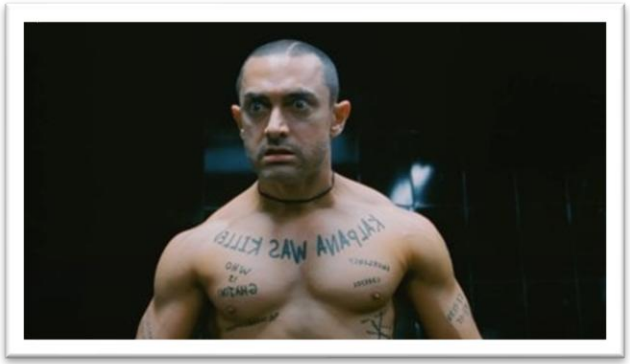
AI Driven Compliance Agents for Smart Utilities

Presented By

Manoj Batra, Vice-President, NatWest Group

KALPANA WAS KILLED
WHO
IS
GHAJINI

Active & Long-Term Memory



Active Memory - an aggregated log of all of the processes and tasks that an agent executes during its runtime; retained as chunks of action-observation pairs in Context Grounding indexes automatically by Agent Builder

Long-Term Memory - a combination of available knowledgebases and reflections on active memory observations that are respectively managed by users setting up Context Grounding and the implicit Agent Memory itself

Active vs Long-Term Memory – Key Differences

- **Lives in Current Session**
- **Short-Term Context (Few minutes/hours)**
- **Remembers: "What are we discussing now?**
- **Fast, Temporary Recall**
- **Clears after Session Ends**
- **Example: "HR Bot remembers your last question in this chat"**

- **Lives Across Sessions**
- **Persistent Context (Days/Weeks/Months)**
- **Remembers: "What did we discuss last time?“**
- **Stored Knowledge, Accessible Later**
- **Persists, Can Be Updated/Deleted**
- **Example: "Sales Bot remembers a customer’s preferences over multiple calls"**

Components of Agent

Agent Evaluation and Calibration – Designtime and Runtime

Natural Language Prompt

Instructions or plan for the agent – its role, goal, and constraints

Composed of
- Input/Output Arguments
- System prompt with role, goals, constraints
- User Prompt
- Examples

Context

Short and Long-term memory used to inform the plan.
Context Grounding to support:
- Querying from knowledgebases to ground prompts
- Agent Memory so the agent can learn based on its runtime

Tools

UiPath tools that are invoked based on the prompt

Tools an agent could use:
- Activities
- Automations
- Microautomations
- Other Agents

Escalations

Involve a human only when necessary – to help gather additional information or review input/output arguments

Agent Escalation paths:
- Action Center Action Apps
- Communication channels (e.g. Slack)

AI Trust Layer with LLM
Ops – Trust, Transparency, and Governance

Components of Agent - Recap

Escalation

INTRODUCTION - Why Compliance Needs Cognitive Automation

- Organizations process thousands of documents (invoices, contracts, filings)
- Compliance teams must validate policy adherence and financial accuracy
- Manual review creates delays and operational risk
- AI powered cognitive automation enables scalable compliance monitoring

Why Agentic Compliance Platforms Matter

- Regulatory pressure continues to grow across industries
- AI decisions must be transparent and explainable
- Agentic AI enables autonomous specialized agents
- Combining LLMs, RPA and Knowledge Retrieval creates intelligent compliance systems

Agentic Compliance Architecture

- UiPath Agent Builder orchestrates specialized AI agents
- Agents perform tasks such as document analysis and policy reasoning
- Retrieval Augmented Generation (RAG) connects agents to enterprise policy knowledge base
- Vector databases ground AI reasoning and reduce hallucinations

Human-in-the-Loop Governance

- Low-risk cases automatically approved by the system
- High-risk cases escalated to UiPath Action Center
- Compliance officers review AI reasoning before final approval
- Ensures governance, accountability and trust in AI decisions

AI Analysis → Risk Scoring → Human Review (Action Center)

USE CASE - AI-Driven Invoice Compliance Monitoring

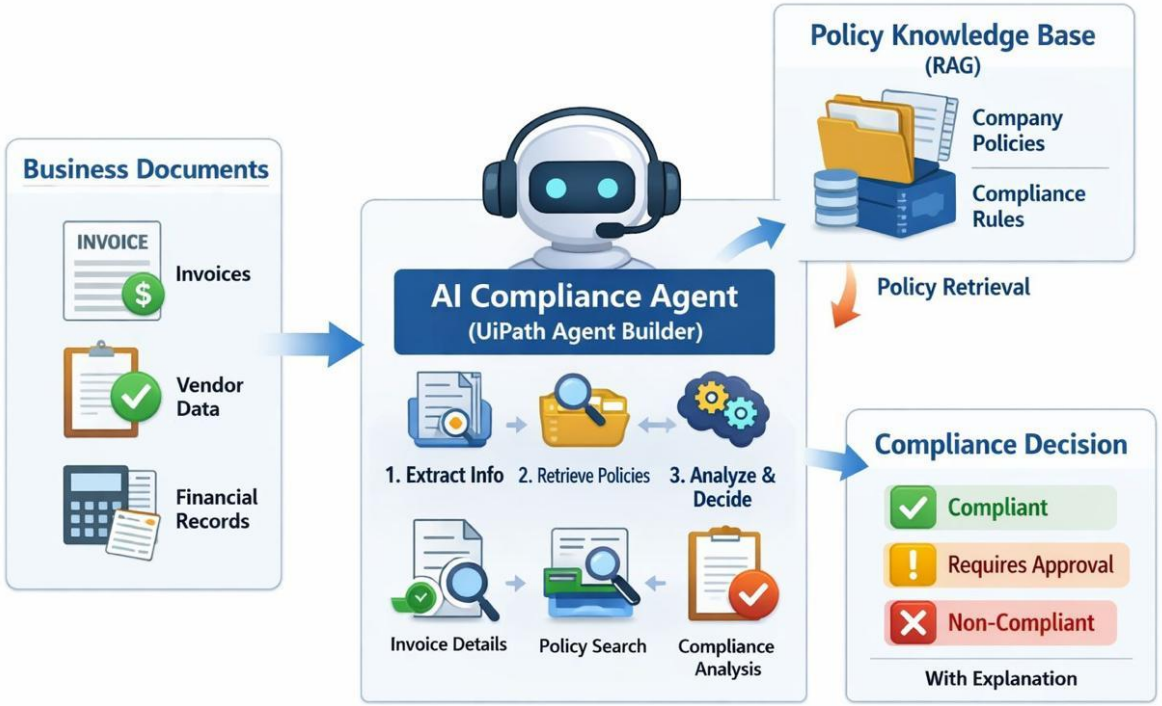
1. Invoice ingested through UiPath automation

2. AI agent extracts and interprets invoice data

3. RAG retrieves relevant financial compliance policies

4. MCP anomaly model detects unusual transaction values

5. Decision engine assigns compliance risk score



- Agentic AI enables scalable compliance automation
- RAG improves decision accuracy and reduces hallucinations
- Hybrid models combine reasoning and statistical anomaly detection
- Human oversight ensures governance and regulatory alignment
- Structured logs create audit-ready compliance workflows
