Week 2026
10 – 14 March 2026, New Delhi

Session : Smart Metering and Smart Meter Data Analytics

How AI is taking Metering Data to the next level

Presented By

Matt Gleeson, VP Energy Transition, Oracle

Today…

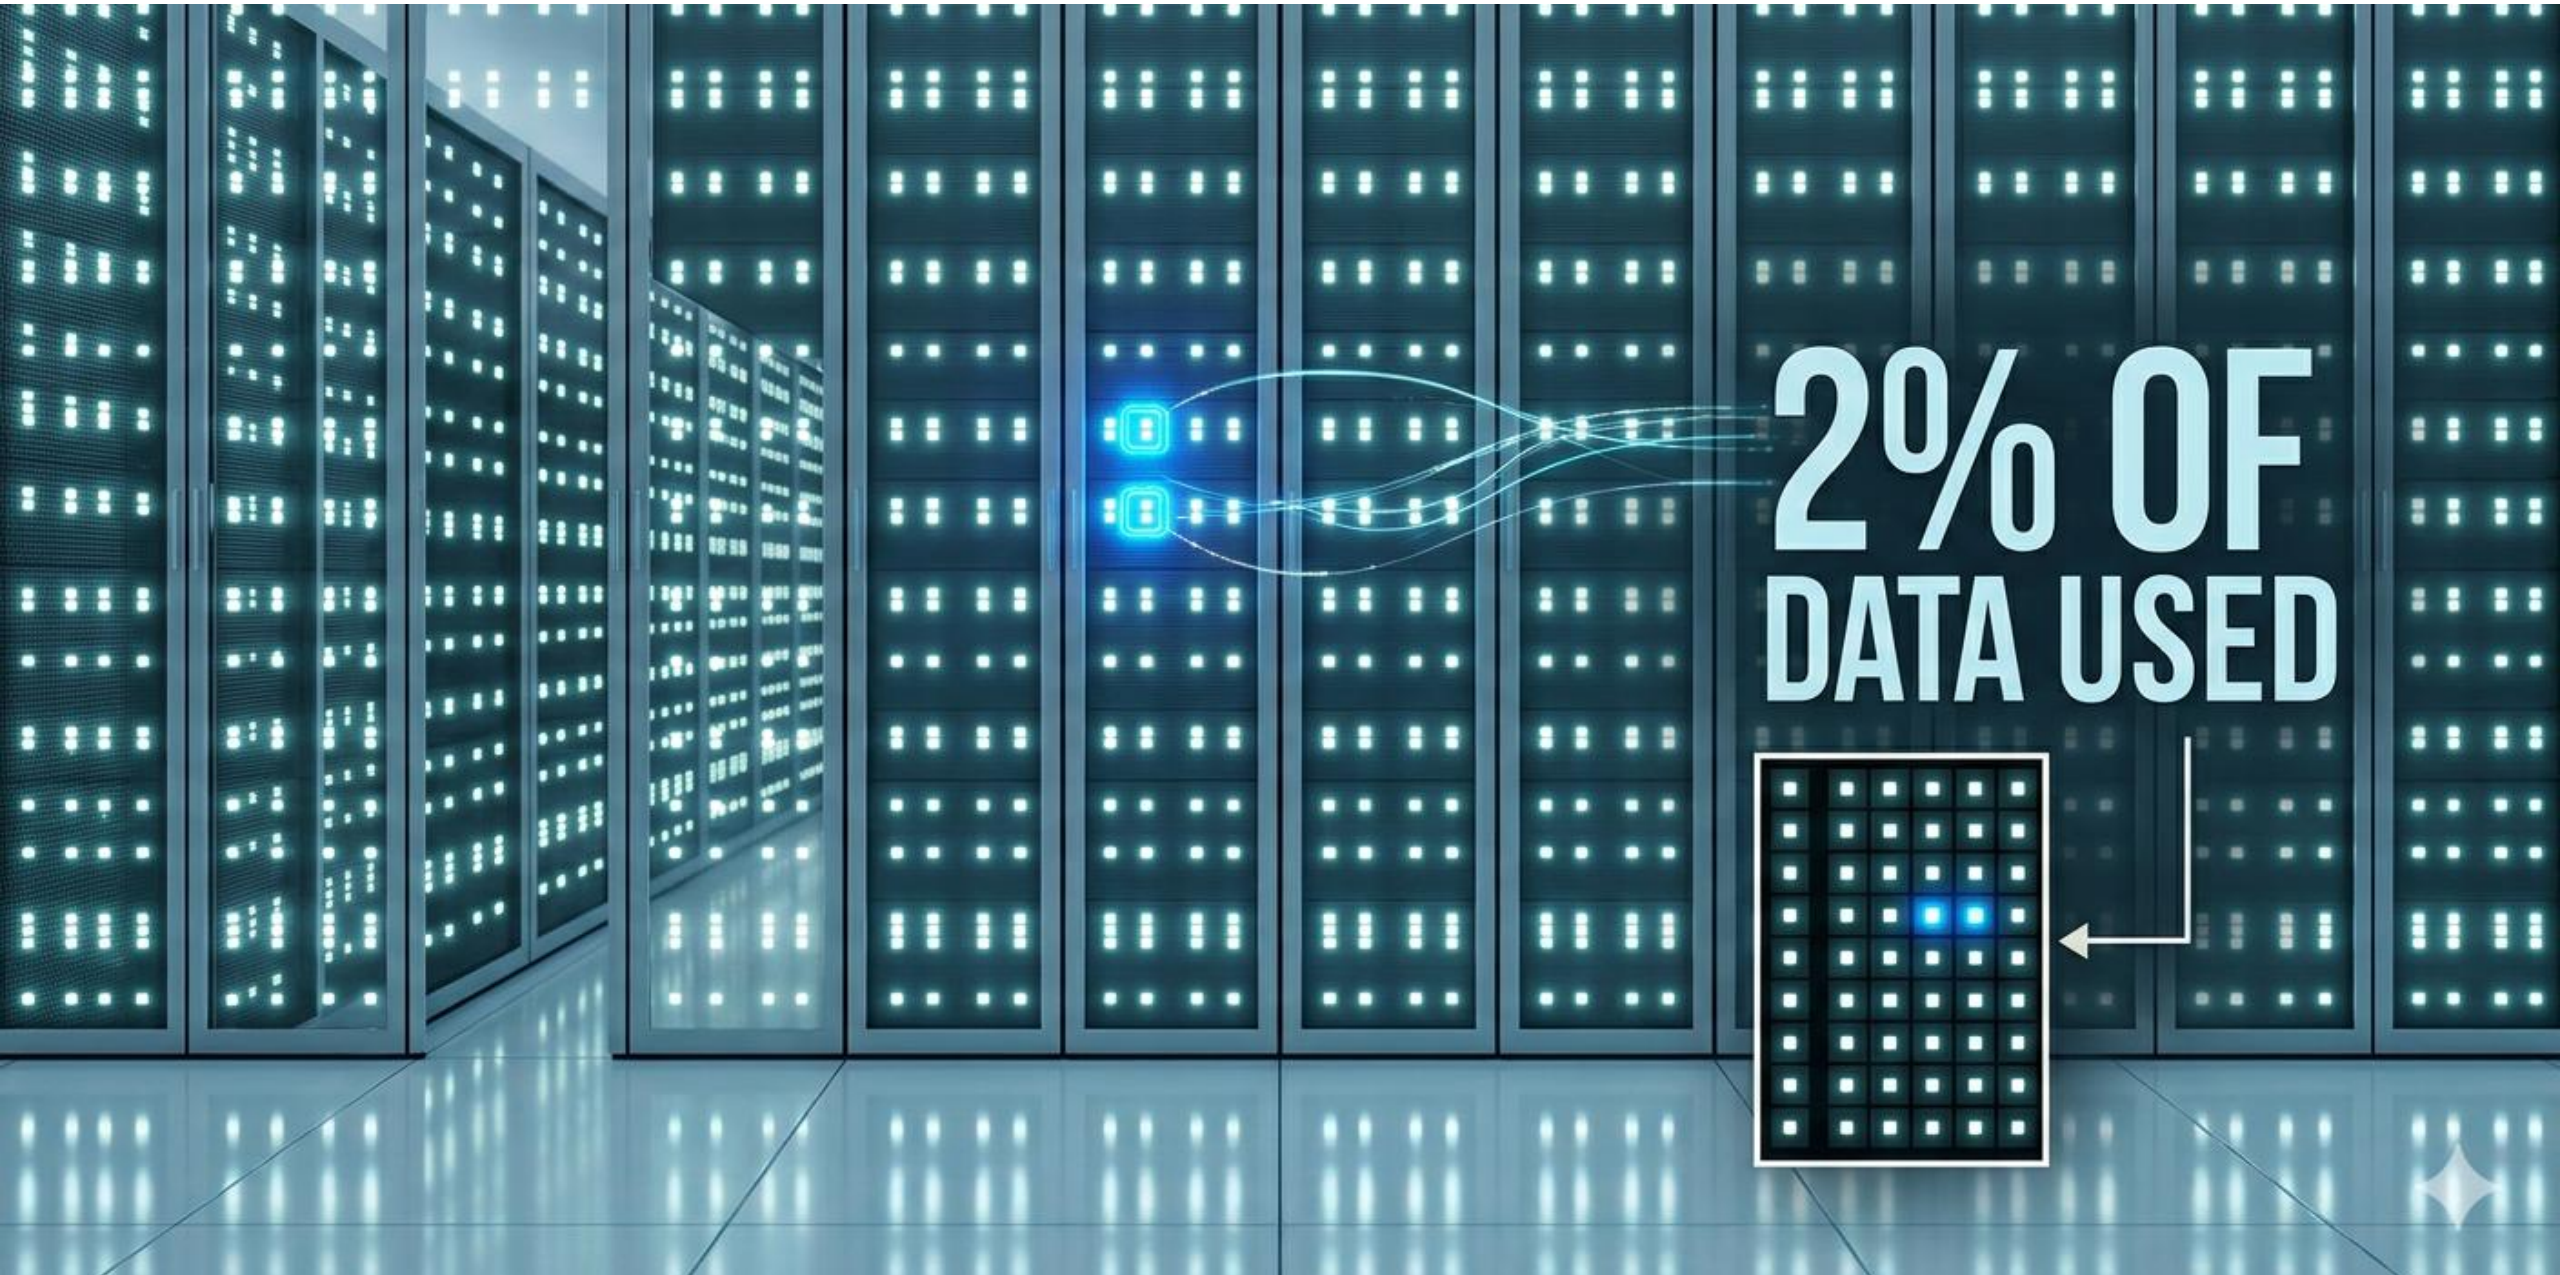
Confidential - Oracle Restricted \Employees Only

The scoreline

Trees (1) vs Meter Reads (35)

Confidential - Oracle Restricted \Employees Only

And yet….



The problem is a clear lack of clarity

Illustrating the role AI can play

- Analyzed 5 years of reads across our customers
- All customers reported too many VEE exceptions they were struggling to stay ahead of
- …….plus the extra compute!
- …… plus the extra batch time pushing billing later.
- Each averaged 10M consumption exceptions and varied between 4 and 800M general VEE exceptions annually.
- It wasn't just down to the rules either – some the rules were too stringent, others not stringent enough
- We used AI to apply Normalcy Checks (just like the Credit Card industry does).
  - Satisfactory measurement = data passes
  - Suspect data gets a full VEE

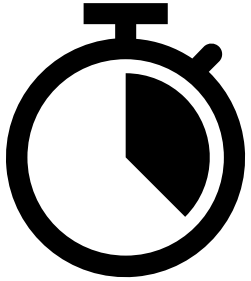
Confidential - Oracle Restricted \Employees Only

The result…

Focussed in on true exceptions

Significant reduction of manual intervention and review

Reduced truck rolls



Reduced compute needs and impact to overnight processing timelines

Confidential - Oracle Restricted \Employees Only

The key to AI innovation – do it at the core
