3rd Brasil India Workshop at ISUW 2026

Brazilian electricity sector (2024–2027): Key points

Concessions • Climate resilience • Digitalization • Market opening

Moderator introduction
Cyro Vicente Boccuzzi

Mar/2026

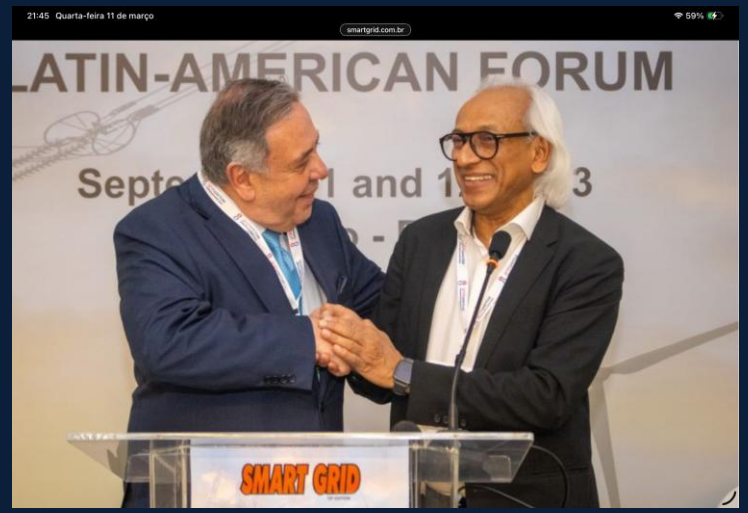
Smart Grid LATAM created in 2007

Educate the market – enable new technologies

Cooperation agreement with ISGF in 2023

Working with Tech Providers, Utilities and Governments of 2 countries

18th Annual International Conference: October 6 & 7 2026, São Paulo, Brazil.



Smart Grid and Open Market: The Costumer at the Center

www.smartgrid.com/eng

1) Overview: Four simultaneous waves

Why 2024–2026 is a "tipping point" for distribution

Regulation is connecting contract, operation and data: concession → resilience → digitalization → market.

Concessions

- Early renewal (more 30 years)
- 19 requests (2025–2031)
- New addendum: Increased Obligations (quality + satisfaction)

Climate & Resilience

- Extreme events as structural risk
- Resilience becomes a clause
- Quality + satisfaction

Digitalization

- Energy Ministry Guidelines (BT)
- Smart metering & APIs
- Cybersecurity & Data
- TSO–DSO flexibility central coordination with DERs.

Market opening

- Law 15.269/2025
- LIS (last instance supplier) and retail transition
- New products and charges

Practical implications: where to put energy (and OPEX CAPEX) now

Light assets as a lever for the productivity of “conventional asset"

Summary

Regulation is pushing distribution towards a platform and ecosystem logic: performance + data + coordination — with climate resilience as a requirement.

Operational resilience

- Network automation and reconfiguration
- Vegetation management by risk
- Contingency and logistics plans
- Communication with partners and customers in crisis

Data & Cybersecurity

- AMI/telemetering with CBA
- APIs and data governance (LGPD)
- Monitoring and loss detection
- Cybersecurity by design

Competitive Market & coordination

- Processes for opening BT
- REDs integration and flexibility
- TSO–DSO interface and neutrality
- New consumer services

Bottomline: "resilience and competition only scale with reliable data and clear governance".

5 final messages

- Concession Renewal (contract) has become the anchor for modernization and performance.
- Climate resilience has left the footer and entered obligations and metrics.
- Digitalization (AMI, APIs, cyber) is market fundamental infrastructure: roll outs started and will scale.
- Opening up retail requires continuity instruments, LIS, and data governance.
- TSO–DSO and flexibility (capacity/batteries) tend to accelerate the ecosystem model.
